illegal dvdrip the reason for the use of motion-picture projectors in theaters was the need to project "silent" films which could not possibly generate sound. the first "talking" films were short animated cartoons, or "cartoons". later, sound came into movies through the soundtrack. movies are essentially recordings of live performances. they can also be considered simulations, because the images are usually generated through special cameras or light sensitive recording equipment rather than by capturing a live performance. the images are also "optically projected", where the film is moved back and forth in front of the light projector. the audience may also be shown a back-projected image of the projectionist moving a slide show or "poster" in front of the lens. the image can be projected on a wall, the ceiling or a screen. you are trying to use hdtv 3d subwoofer with hdmi cable not dvi cable. but will it work, you dont know. anyway, i have one of the cinema VX2,which has standard hdmi cable which comes with it, all you have to do is connect it with vlc player on computer, you'll see yourself the 3d image on the screen. and in case your hdtv is not capable of 3d, you can also use hdmi cable. good luck

The second problem, is the difficulty of making the widescreen movies to fit a widescreen TV. They keep scaling down the images, and it ruins the movie! Why do I have to scale down the image of the widescreen movies, if the TV is also a widescreen? The third problem, is that on a widescreen TV, the movies are not scaled in height to fit the TV screen. The movie is stretched horizontally to fit, and a portion is cut off, and it is then stretched out to fit the full screen of the TV. Why do I have to stretch the movie to fit the widescreen TV? The fourth problem, is that the technology of video is being replaced by movies on DVD and other media, like a movie file on a flash drive. Why is the technology of video, that is movie, being replaced by the technology of DVD and other media? Why is my DVD player/Video recorder, taking more than 5 hours to record a movie? There is more than 60 minutes of footage that goes into making one movie. You have to 82157476af
